We hope we have all security settings right....

The server run all static pages from a RAM disk
The server log store your IP in a RAM disk logg, no backup or saving.
The server now have 32GB RAM.
New faster motherboard and CPU.

We are waiting for our new internet cable, that is due later in December 2017.

:welcome:

We now have 4x 8GB RAM in the server. There is an extra fan mounted on top of the chipset.
Computer power supply is still the same, but the fan has been replaced.
