It happens that a tracker go missing or is taken down. For the torrent to work you will need a tracker. The same trackers must be used on both ends. There are the trackers that the server use of old and obscure torrents, that have lost its original trackers.

udp://93.158.213.92:1337/announce

http://tracker.opentrackr.org:1337/announce

udp://45.154.253.9:6969/announce

udp://45.14.225.8:1337/announce

udp://tracker.tiny-vps.com:6969/announce

udp://9.rarbg.me:2780/announce

udp://9.rarbg.to:2730/announce

udp://open.stealth.si:80/announce

udp://tracker.internetwarriors.net:1337

udp://tracker.torrent.eu.org:451/announce

udp://tracker.openbittorrent.com:80

udp://tracker.coppersurfer.tk:6969/announce

udp://exodus.desync.com:6969

udp://tracker.opentrackr.org:1337

Number-trackers works without DNS...

The torrents we have on this site is generally seeded by the server. You connect to the server by adding the server as a Peer.

Find out the IP number of the forum web site, using some tool or properties window.
Enter the IP number with the port 31740 as a peer. Example: 84.217.53.1:31740

Your computer connects and start to download!
If the server don't have a download open, request it by a private message to Tufa moderator.

In the uTorrent software for Windows:

Select the torrent with a problem as the active torrent. click on it.
Select the "Peers" tab at the lower half of the view.
Right-click to "Add Peer"
paste in the IP:Port
Hit "OK"
It can take several minutes to connect.
