As introduction, I take this post by Simon: <http://www.cluesforum.info>

OFFICIAL NASA PICTURES ONLY

The Moonhoax has been exposed a long time ago. Still however, many people still believe that the Apollo missions were real.

So, unlike many other researches using dubious source material, let's now look at pictures easily found on the official NASA website (2009):
<http://www.nasa.gov/home/index.html>

Here is the (in)famous "Moon Rover" in the middle of a moonscape. How did it get there??

Here's another close-up view of the "Moon Rover":

Ok, so naysayers will say:

"THE MOON-SAND WAS SO COMPACT THAT IT DIDN'T LEAVE ANY VISIBLE WHEEL/OR FOOTPRINT".

Well... THIS IS WHAT NASA has on its website:

http://www.nasa.gov/mission_pages/LRO/mult...pollo/sites.html

So, if an 'astronaut footpath' can be seen from this distance - why can't we see it on a close-up picture?

Then, we have the old lighting issues that so many researchers have tried for years and years to point out to the general public - yet been derided by the billion-dollar-strong disinformation campaign upheld by NASA (and their handlers):

This other NASA picture shows an "Astro-naught" with an American flag. All I have done here is a simple, gradual contrast change of this photograph. A strange shape is revealed in the background. Do I know what it is? No - but it simply proves beyond any shadow of doubt that this is a manipulated photograph.

But of course, you will STILL have friends and family members believing that we went to the moon. You may want to show them this official NASA picture of the APOLLO11 "Lunar Module". Do they all think this "THING" has the looks of a serious spaceship?

Some will say: "OK, maybe APOLLO11 was faked to jump ahead of the Russians in the space race. But the successive APOLLO missions were REAL". That's when you will have to show them this comparison of 2 pictures of the "APOLLO15 mission":

When was the picture WITHOUT the Lunar Module taken?
BEFORE or AFTER the Apollo15 visit to the moon?

If you lift the lightning a bit, you can see the cuts in the picture:

You can, sort of, see the lightning in the reflection of the leg:

There is also a "moonstar" in the background:

... but I think it is a lightswitch's red/orange illumination of the photo studio!

Don't forget to investigate a car from 1968, in some museum or so. Compare technology with a modern car: Engine computer control, navigation system, engine efficiency, finish and technology of the interior, ...
