BBC four series -- from TV -- 28 min
DAYS THAT SHOOK THE WORLD

A bit thrilling and well produced this episode put the moon landing into its historical context. A strong heroic tone.

History Channel
The Universe
The Moon.

torrent infoThe moon has comforted man for thousands of years. It's been everything from a god to a compass, and the only cosmic body human beings have ever visited. NASA is planning to build a permanent outpost there. Discover how the moon came to be--if you don't already know, you will be astounded.

[HST] The Universe - The Moon.divx

The usual USA-style cutting, where everything has to be told twice. Tell some basics of the moon while, at the same time, illustrating with moon-walk and Apollo rocket pictures. Also include a sinister subliminal mix of the Twin towers shown in front of a moon picture, with the towers transparent, and then the picture fade into the double blue steaks to illustrate the missing Towers.

High score on emotional and hidden psychological content.

The Universe

Mysteries of the Moon.

torrent info For thousands of years, mankind has found comfort in its presence. It's been a lantern for nighttime travelers, a timekeeper for farmers, and a location finder for sailors at sea. For some cultures, it's even been a god. It's the only cosmic body ever visited by human beings. From afar, the Moon's luminance has captivated us since the beginning of time. And a closer look at the beacon in the dark sky reveals an ever-present source of myth, intrigue, controversy and unsolved mysteries. The field of science may cast an empirical light on some things about the Universe, but lunar experts are the first to admit they don't have all the answers when it comes to our Moon. This episode explores the theories behind Lunar Transient Phenomena that have left scientists stumped for centuries; takes to the Canadian waters to see how the Moon effects our planet through tides; and dusts off some age-old myths and weighs arguments that without our Moon, humanity may not even exist.

bla bla! Some kind of LSD-kind essay dwelling upon phenomena no-one has seen, and that has not been properly substantiated.

BBC
horizon
MOON FOR SALE Moon For Sale(WTC-SWE).avi

A kind of science-fiction film in a documentary setting. Seems to be rather light-weight in terms of science. Explore that Helium-3 should be trapped in the Luna soil, and that this should be of significant use for fusion-power on Earth. Tell a story that mining the Luna soil and retrieving the Helium-3 for use on earth might be profitable. Speculates in the moral issue of mining on the Moon. Space-race with "Russians" and "Chinese". Much panning across Moon/Apollo "photos".

Picture from rendered film showing a future Moon rocket:

Moonwalk One -- The Director's Cut
This support the "official" version. Due to good pictures, the film is rather pathetic at some point, such as 01:25:15 -- 01:29:00, where we see a typical 60:s science-fiction animation. The LEM cannot abruptly rotate in free space. Any movement must be continuous and gradual.

DOCUMENTARY: Moonwalk One - The Director's Cut
On: Discovery Channel (UK)

Date: Monday 20th July 2009 (UK Premiere)

Time: 10:00 PM to 00:30 AM (2 hour and 30 minutes long)

Moonwalk One is a feature-length documentary film about the flight of Apollo 11, which landed the first earthlings on the moon. Besides portraying the massive technological achievement of that event, the film places it in some historical context, and tries to capture the mood and feel of the people on Earth at the time when man first walked on another world.

Director: Theo Kamecke

Starring: Neil Armstrong, Michael Collins and Buzz Aldrin
